PROFILE

Computer Science student at RVCE who works inside early-stage teams: talking to business owners, finding their real operational problems, and turning them into product features and AI-driven automations. Interested in AI agents, commerce and 0→1 execution.

EXPERIENCE

Customer-Side Engineering & Business Development — Vaidanth (team of 3, with the founder and a dentist)

- Observed treatment procedures first-hand at RV Dental College and found that inspection and software logging took two people. Added voice entry to the ERP so one doctor can inspect and log at once.
- Built the ERP demo and developed AI-assisted automations that pair LLM reasoning with a deterministic layer for reliable execution.
- Designing a stock-and-price comparison marketplace for independent clinics' reorders. In talks with DentMedHub (web API integration) and local distributors for regular stock and price updates, so low-stock items show live options.
- Identified logistics gaps between clinics, labs and distributors; spoke with logistics companies and am exploring a viable financial model.
- Visited Confident Dental Labs, where customers cited poor order transparency, and am planning an order-tracking and lab-recommendation platform ahead of a second visit to understand their operations.

Business & Startup Operations — VidyuthLabs (team of 6)

- Part of a six-person team building portable electrochemical sensors for food and water; work across customer discovery and commercialisation.
- Research potential customers, use cases and market-entry routes; support stakeholder outreach and product positioning.

Head of Marketing — TEDx RVCE

- Lead marketing, promotion, communications and audience outreach.
- Drove outreach for an event that brought together around 120 attendees.

Events & Entrepreneurship — E-Cell, RVCE

- Lead organizer of a startup event with 22 participating startups, evaluated by an industry-relevant jury.

PROJECT

Circularity Exchange: Inter-Agent Communication | Hackathon

- Built a multi-agent system to fix coordination gaps in industrial by-product exchange. Example: a steel producer's by-product can meet a coastal cement company's material need, but poor communication and timing often stop it.
- Designed specialised agents that share requirements, availability and business context so matches can be found and coordinated earlier.

SKILLS

AI & Automation: LLM Workflows • AI Agents • Workflow Automation • Prompt Engineering • Deterministic AI Workflows • ChatGPT • Claude
Startup & Growth: Customer Discovery • B2B Outreach • Market Research • Competitor Research • Product-Market Fit • Business Development
Communication: Customer Interviews • Public Speaking • Stakeholder Coordination • Event Marketing • Debate
Technical: Python • C/C++ • ML Fundamentals • GitHub

EDUCATION

B.E. Computer Science & Engineering — RV College of Engineering, Bengaluru | CGPA 9.78 | Expected August 2029
